

Under ground water week 16 – 22 July 2023 was celebrated in the department to aware the people. More than 120 students were attended the progarmme, students of M Sc Environmental Science, M Sc Zoology, M Sc Aquaculture and students of UG classes joined the audience. Thoughts were shared by students and faculty members after deliberation of lectures by Prof. V.B. Kushwaha and Prof. R K Upadhyay. The most discussed topics were groundwater recharging and & ongoing water crisis in the country. Installing a rooftop rainwater harvester can serve as an alternative source of fresh water that can fulfill the daily demand of the people in low rainfall areas. Efficient use of wastewater is a good way of conservation. Groundwater Week 2023 promised a valuable experience for anyone us who is passionate about the role of groundwater in sustaining life and the environment.
